

Performance Marinetti Mechanical Orchestra

Marinetti Mechanical Orchestra is a pilot project selected from *Action Sharing*, an initiative of Share Festival with the support of the Chamber of Commerce of Turin. *Action Sharing* aims at developing a locally "shared" programme in Turin area, with the goal to organize a multidisciplinary and interdisciplinary platform where various actors, especially artists and engineers, but also scientists, economists, social workers and teachers, meet on the common field of technology.

Called after the futurist poet Filippo Tommaso Marinetti, OMM is a project which is inspired by an ideal link between the Turin industrial past and its current transformation into a city of knowledge. Based on *Tambours du Bronx* Style (a famous industrial French drummers band), ***Orchestra Meccanica Marinetti*** consist of ten drummer robots, playing live on steel bins, guided by a performer of a conductor. The movement and the work of the industries, which built up this City, are shown thanks to the interactive digital languages of contemporary age. Robots has been realized thanks to the collaboration between Angelo Comino, the Association for Robotics in Piedmont, Lim - Laboratorio Interdisciplinare Meccatronica – Polytechnic of Turin and some enterprises working on robotics in Piedmont: Prima Electronics, ERXA and ACTUA.
